

Successful International Project Management I (Basic)

MP205

Project management is a core skill in today's fast moving collaborative research and business environment. This two-day course is demanding and intense and combines all tools and techniques into realistic and participants'-orientated project simulations. The emphasis is laid on project management in a changing world, on appropriate project design and structures as well as on how to run a project on a day-to-day basis.

Successful international Project Management I is an invitation to participants to listen, network, experience and apply all the offered techniques in many exercises and case studies in order to improve the participants' own project work. Participants are welcome to discuss their own projects.

The following topics will be covered:

- Life cycle and conflicts in projects
- Planning Techniques
- Charts, diagrams and other tools (i.e. Macro Plan, WBS, how to design a Gantt chart and use it strategically)
- Project Organisations
- Team building, motivation and control
- Communication
- Time Management Principles
- Risk Management
- Running a project on a day-to-day basis
- Monitoring and control
- International projects
- Importance of intercultural issues in projects
- Lessons learned and project Close.

The course is designed for research managers, administrators, scientists, engineers project managers and all other individuals in charge of projects in research institutions, universities, private industry enterprises and the public sector. Participants should have a basic knowledge in project management or should have attended our Basic Project Management course.

The course takes place in a hotel in Karlsruhe.

Duration: 2 days
